

# Package ‘WDI’

March 3, 2019

**Title** World Development Indicators (World Bank)

**Description** Search, extract and format data from the World Bank's World Development Indicators.

**Author** Vincent Arel-Bundock <vincent.arel-bundock@umontreal.ca>

**Maintainer** Vincent Arel-Bundock <vincent.arel-bundock@umontreal.ca>

**LazyData** yes

**Type** Package

**LazyLoad** yes

**Encoding** UTF-8

**Version** 2.6.0

**URL** <https://www.github.com/vincentarelbundock/WDI>

**Date** 2019-03-02

**Depends** R (>= 3.1.0)

**Imports** RJSONIO

**Suggests** tidyr (>= 0.8.0), testthat

**RoxygenNote** 6.1.1

**License** GPL-3

**NeedsCompilation** no

**Repository** CRAN

**Date/Publication** 2019-03-03 21:00:16 UTC

### Description

Search, extract and format data from the World Bank's World Development Indicators

### Details

The WDI function provides convenient access to the World Bank's WDI download API. For fast searching, the WDI package ships with a local list of available data series. This local list can be updated to the latest version using the WDIcache function.

### Author(s)

Vincent Arel-Bundock <varel@umich.edu>

### References

---

|     |   |
|-----|---|
| WDI | <i>WDI: World Development Indicators (World Bank)</i> |
|-----|---|

---

### Description

Downloads the requested data by using the World Bank's API, parses the resulting XML file, and formats it in long country-year format.

### Usage

```
WDI(country = "all", indicator = "NY.GNS.ICTR.GN.ZS", start = NULL,
     end = NULL, extra = FALSE, cache = NULL)
```

### Arguments

|           |   |
|-----------|---|
| country   | Vector of countries (ISO-2 character codes, e.g. "BR", "US", "CA") for which the data is needed. Using the string "all" instead of individual iso codes pulls data for every available country.   |
| indicator | Character vector of indicators codes. See the WDIsearch() function. If you supply a named vector, the indicators will be automatically renamed: 'c('women_private_sector' = 'BI.PWK.PRVS.FE.ZS')' |
| start     | First year of data. If NULL, the start year is set to 1950.   |
| end       | Last year of data. If NULL, the end year is set to the current year.  |

extra TRUE returns extra variables such as region, iso3c code, and incomeLevel  
 cache NULL (optional) a list created by WDIcache() to be used with the extra=TRUE argument

**Value**

Data frame with country-year observations. You can extract a data.frame with indicator names and descriptive labels by inspecting the 'label' attribute of the resulting data.frame: 'attr(dat, 'label')'

**Author(s)**

Vincent Arel-Bundock <vincent.arel-bundock@umontreal.ca>

**Examples**

```
WDI(country="all", indicator=c("AG.AGR.TRAC.NO", "TM.TAX.TCOM.BC.ZS"),
     start=1990, end=2000)
WDI(country=c("US", "BR"), indicator="NY.GNS.ICTR.GN.ZS", start=1999, end=2000,
     extra=TRUE, cache=NULL)

# Rename indicators on the fly
WDI(country = 'CA', indicator = c('women_private_sector' = 'BI.PWK.PRVS.FE.ZS',
                                'women_public_sector' = 'BI.PWK.PUBS.FE.ZS'))
```

---

 WDIbulk

---

*Download all the WDI indicators at once.*

---

**Description**

Download all the WDI indicators at once.

**Usage**

```
WDIbulk()
```

**Value**

Data frame

a list of 6 data frames: Data, Country, Series, Country-Series, Series-Time, FootNote

**Author(s)**

Vincent Arel-Bundock <vincent.arel-bundock@umontreal.ca>

---

 WDIcache

*Update the list of available WDI indicators*

---

**Description**

Download an updated list of available WDI indicators from the World Bank website. Returns a list for use in the WDIsearch function.

**Usage**

```
WDIcache()
```

**Value**

Series of indicators, sources and descriptions in two lists list

**Note**

Downloading all series information from the World Bank website can take time. The WDI package ships with a local data object with information on all the series available on 2012-06-18. You can update this database by retrieving a new list using WDIcache, and then feeding the resulting object to WDIsearch via the cache argument.

---

 WDIsearch

*Search names and descriptions of available WDI series*

---

**Description**

Data frame with series code, name, description, and source for the WDI series which match the given criteria

**Usage**

```
WDIsearch(string = "gdp", field = "name", short = TRUE,
  cache = NULL)
```

**Arguments**

|        |  |
|--------|--|
| string | Character string. Search for this string using grep with ignore.case=TRUE.   |
| field  | Character string. Search this field. Admissible fields: 'indicator', 'name', 'description', 'sourceDatabase', 'sourceOrganization' |
| short  | TRUE: Returns only the indicator's code and name. FALSE: Returns the indicator's code, name, description, and source.              |
| cache  | Data list generated by the WDIcache function. If omitted, WDIsearch will search a local list of series.                            |

**Value**

Data frame with code, name, source, and description of all series which match the criteria.

**Examples**

```
WDIsearch(string='gdp', field='name', cache=NULL)
WDIsearch(string='AG.AGR.TRAC.NO', field='indicator', cache=NULL)
```

---

|          |  |
|----------|--|
| WDI_data | <i>World Development Indicators series and country information</i> |
|----------|--|

---

**Description**

A list of two character matrices.

**Usage**

```
WDI_data
```

**Format**

List of 2 data frames

**Details**

The first character matrix includes a full list of WDI series (updated 2012-06-18):

- id WDI indicator code
- name Short name of the series
- sourceNote Detailed description provided by the source
- source Source database
- sourceOrganization Source organization

The second character matrix includes extra country information (updated 2012-06-18):

- iso3c ISO 3-letter country code
- iso2c ISO 2-letter country code
- country Country name (long English form)
- region Region
- capital Capital
- longitude Longitude
- latitude Latitude
- income Income level as defined by the World Bank
- lending Lending category, as defined by the World Bank
