R topics documented:

directors ................................................................. 2
episodes ................................................................. 2
writers ................................................................. 3

Index 5
## directors

### List of directors

**Description**

List of directors for all episodes from the revived Doctor Who era (2005-present)

**Usage**

directors

**Format**

This data frame contains the following columns:

- story_number: Story number
- director: Episode’s director

**Source**

**Examples**

```r
library(dplyr)
directors %>%
  count(director) %>%
  arrange(desc(n)) %>%
  head(5)
```

## episodes

### List of episodes

**Description**

List of all episodes from the revived Doctor Who era (2005-present)

**Usage**

episodes

**Examples**

```r
episodes
```
**writers**

**Format**

This data frame contains the following columns:

- **era** "classic" or "revived"
- **season_number** Season number
- **serial_title** Serial title if available
- **story_number** Story number
- **episode_number** Episode number in season
- **episode_title** Episode Title
- **type** "episode" or "special"
- **first_aired** Date the episode first aired in the U.K.
- **production_code** Episode’s production code if available
- **uk_viewers** Number of U.K. viewers (millions)
- **rating** Episode’s rating
- **duration** Episode’s duration in minutes

**Source**

**Examples**

```r
library(dplyr)
episodes %>%
  filter(type == "special")
```

---

**writers**

*List of writers*

**Description**

List of writers for all episodes from the revived Doctor Who era (2005-present)

**Usage**

writers

**Format**

This data frame contains the following columns:

- **story_number** Story number
- **writer** Episode’s writer
4

**Source**

**Examples**

```r
library(dplyr)
writers %>%
  count(writer) %>%
  arrange(desc(n)) %>%
  head(5)
```
