

# Package ‘dtr2’

July 10, 2020

**Title** Manipulate Date, POSIXct and hms Vectors

**Version** 0.3.0

**Description** Manipulates date ('Date'), date time ('POSIXct') and time ('hms') vectors. Date/times are considered discrete and are floored whenever encountered. Times are wrapped and time zones are maintained unless explicitly altered by the user.

**License** MIT + file LICENSE

**URL** <https://github.com/poissonconsulting/dtr2>

**BugReports** <https://github.com/poissonconsulting/dtr2/issues>

**Depends** R (>= 3.3)

**Imports** chk, hms, lifecycle

**Suggests** covr, rlang, testthat

**RdMacros** lifecycle

**Encoding** UTF-8

**Language** en-US

**LazyData** true

**RoxygenNote** 7.1.1.9000

**NeedsCompilation** no

**Author** Joe Thorley [aut, cre] (<<https://orcid.org/0000-0002-7683-4592>>),  
Poisson Consulting [cph, fnd]

**Maintainer** Joe Thorley <joe@poissonconsulting.ca>

**Repository** CRAN

**Date/Publication** 2020-07-10 10:30:06 UTC

---

check_tz	<i>Check Time Zone</i>
----------	------------------------

---

**Description**

Checks an object's time zone as returned by `dtl_tz()`.

**Usage**

```
check_tz(x, tz = dtl_tz(x), x_name = substitute(x), error = TRUE)
```

**Arguments**

x	The object to check.
tz	A string of the time zone to check that x's matches.
x_name	A string of the name of the object.
error	A flag indicating whether to throw an informative error or immediately generate an informative message if the check fails.

**Value**

An invisible copy of x (if it doesn't throw an error).

**See Also**

[dtl\\_tz\(\)](#)

**Examples**

```
check_tz(Sys.time(), "UTC", error = FALSE)
```

---

chk_time	<i>Check Time</i>
----------	-------------------

---

**Description**

Checks if scalar hms object using `vld_time()`.

**Usage**

```
chk_time(x, x_name = NULL)
```

**Arguments**

x	The object to check.
x_name	A string of the name of object x or NULL.

**Value**

NULL, invisibly. Called for the side effect of throwing an error if the condition is not met.

**Examples**

```
chk_time(hms::as_hms("10:00:10"))
try(chk_time(1))
```

---

dtt	<i>dtt Object</i>
-----	-------------------

---

**Description**

A dtt (short for date time) object is an object of class Date (date), POSIXct (datetime) or hms (time).

---

dtt_add_units	<i>Add Units</i>
---------------	------------------

---

**Description**

Add time units to a date time vector.

**Usage**

```
dtt_add_units(x, units, n = 1L)
dtt_add_years(x, n = 1L, ...)
dtt_add_months(x, n = 1L, ...)
dtt_add_days(x, n = 1L, ...)
dtt_add_hours(x, n = 1L, ...)
dtt_add_minutes(x, n = 1L, ...)
dtt_add_seconds(x, n = 1L, ...)
```

**Arguments**

x	A date time vector.
units	A string of the units.
n	An integer of the number of units.
...	Unused.

**Value**

The modified date time vector.

**See Also**

[dtc\\_subtract\\_units\(\)](#)

**Examples**

```
dtc_add_units(as.Date("1999-12-31"), "days")
```

---

dtc_adjust_tz	<i>Adjust Time Zone</i>
---------------	-------------------------

---

**Description**

Adjusts the time zone so that clock (but not the actual) time is altered for a date time vector. Equivalent to `lubridate::with_tz()`.

**Usage**

```
dtc_adjust_tz(x, tz = dtc_default_tz(), ...)
```

```
## S3 method for class 'POSIXct'
```

```
dtc_adjust_tz(x, tz = dtc_default_tz(), ...)
```

**Arguments**

x	A POSIXct vector.
tz	A string of the time zone.
...	Unused

**Value**

The date time vector with the new time zone and time.

**Methods (by class)**

- POSIXct: Adjust the time zone for a POSIXct vector

**See Also**

[dtc\\_set\\_tz\(\)](#)

**Examples**

```
dtc_adjust_tz(as.POSIXct("1970-01-01", tz = "Etc/GMT+8"), tz = "UTC")
```

---

dtt\_adjust\_units      *Adjust Units*

---

### Description

Adjust Units

### Usage

```
dtt_adjust_units(x, from = "seconds", to = "seconds")
```

### Arguments

x	An integer or numeric vector
from	A string of the original units.
to	A string of the new units.

### Value

A numeric vector.

### Examples

```
dtt_adjust_units(60, to = "minutes")
```

---

dtt\_aggregate      *Aggregates*

---

### Description

Aggregates a date/time vector

### Usage

```
dtt_aggregate(x, units, ...)

## S3 method for class 'Date'
dtt_aggregate(x, units = "days", ...)

## S3 method for class 'POSIXct'
dtt_aggregate(x, units = "seconds", ...)

## S3 method for class 'hms'
dtt_aggregate(x, units = "seconds", ...)
```

**Arguments**

x                    A date/time vector.  
 units                A string of the units to aggregate by.  
 ...                  Unused.

**Details**

The possible units values are 'seconds', 'minutes', 'hours', 'days', 'months' or 'years'.

**Value**

The floored date/time vector.

**Methods (by class)**

- Date: Aggregate a Date vector
- POSIXct: Aggregate a POSIXct vector
- hms: Aggregate a hms vector

**Examples**

```
dtt_aggregate(as.Date(c("1992-01-01", "1991-02-02", "1991-03-03")), "years")
```

---

dtt_complete	<i>Complete</i>
--------------	-----------------

---

**Description**

Completes date/time vector.

**Usage**

```
dtt_complete(x, ...)

## S3 method for class 'Date'
dtt_complete(
  x,
  from = min(x),
  to = max(x),
  units = "days",
  unique = TRUE,
  sort = TRUE,
  ...
)

## S3 method for class 'POSIXct'
```

```
dtt_complete(  
  x,  
  from = min(x),  
  to = max(x),  
  units = "seconds",  
  unique = TRUE,  
  sort = TRUE,  
  ...  
)  
  
## S3 method for class 'hms'  
dtt_complete(  
  x,  
  from = min(x),  
  to = max(x),  
  units = "seconds",  
  unique = TRUE,  
  sort = TRUE,  
  ...  
)
```

### Arguments

x	A date/time vector.
...	Unused.
from	A date/time scalar of the start.
to	A date/time vector of the end.
units	A string of the time units.
unique	A flag specifying whether to only return unique values.
sort	A flag specifying whether to sort the vector.

### Value

The completed date/time vector.

### Methods (by class)

- Date: Complete a Date sequence vector
- POSIXct: Complete a POSIXct sequence vector
- hms: Complete a hms sequence vector

### Examples

```
dtt_complete(as.Date(c("2001-01-01", "2001-01-03", "2001-01-01")))
```

---

dtc_completed	<i>Completed</i>
---------------	------------------

---

## Description

Tests whether a date time is complete.

## Usage

```
dtc_completed(x, ...)  
  
## S3 method for class 'Date'  
dtc_completed(x, units = "days", unique = TRUE, sorted = TRUE, ...)  
  
## S3 method for class 'POSIXct'  
dtc_completed(x, units = "seconds", unique = TRUE, sorted = TRUE, ...)  
  
## S3 method for class 'hms'  
dtc_completed(x, units = "seconds", unique = TRUE, sorted = TRUE, ...)
```

## Arguments

x	A date time vector
...	Unused.
units	A string of the units.
unique	A flag indicating whether the values must be unique.
sorted	A flag indicating whether the values must be sorted.

## Value

A flag indicating whether complete.

## Methods (by class)

- Date: Test if Date vector is complete
- POSIXct: Test if POSIXct vector is complete
- hms: Test if POSIXct vector is complete

---

`dtt_date`*Date*

---

**Description**

Coerces vectors to floored Date vectors.

**Usage**

```
dtt_date(x, ...)  
  
dtt_date(x) <- value  
  
## S3 method for class 'integer'  
dtt_date(x, ...)  
  
## S3 method for class 'double'  
dtt_date(x, ...)  
  
## S3 method for class 'character'  
dtt_date(x, ...)  
  
## S3 method for class 'Date'  
dtt_date(x, ...)  
  
## S3 method for class 'POSIXct'  
dtt_date(x, ...)  
  
## S3 method for class 'hms'  
dtt_date(x, ...)  
  
## S3 replacement method for class 'Date'  
dtt_date(x) <- value  
  
## S3 replacement method for class 'POSIXct'  
dtt_date(x) <- value  
  
dtt_set_date(x, value)  
  
## S3 replacement method for class 'Date'  
dtt_time(x) <- value  
  
## S3 replacement method for class 'POSIXct'  
dtt_time(x) <- value
```

**Arguments**

`x` A vector.

...	Unused.
value	A date vector.

**Value**

A floored Date vector.

**Methods (by class)**

- integer: Coerce integer vector to a floored Date vector
- double: Coerce double vector to a floored Date vector
- character: Coerce character vector to a floored Date vector
- Date: Coerce Date vector to a floored Date vector
- POSIXct: Coerce POSIXct vector to a floored Date vector
- hms: Coerce hms vector to a floored Date vector
- Date: Set date values for a Date vector
- POSIXct: Set date values for a POSIXct vector
- Date: Set time values for a Date vector
- POSIXct: Set date values for a POSIXct vector

**Examples**

```
dtt_date(1L)
dtt_date(-1)
dtt_date("2000-01-01")
as.Date(as.POSIXct("2019-05-01", tz = "Etc/GMT-8"))
dtt_date(as.POSIXct("2019-05-01", tz = "Etc/GMT-8"))
dtt_date(hms::as_hms("23:59:59"))
dtt_date(hms::as_hms("24:00:00"))
```

---

dtt\_date\_add\_time      *Date Add Time*

---

**Description**

Adds times to Dates vector and sets timezone in a single function.

**Usage**

```
dtt_date_add_time(x, time, tz = dtt_default_tz())
```

**Arguments**

x	A Date vector.
time	A hms vector.
tz	A string of the timezone.

**Value**

A POSIXct vector.

**Examples**

```
dtt_date_add_time(as.Date("2001-03-05"), hms::as_hms("06:07:08"), tz = "Etc/GMT+9")
```

---

dtt_date_time	<i>Date Time</i>
---------------	------------------

---

**Description**

Coerces vectors to floored POSIXct vectors.

**Usage**

```
dtt_date_time(x, ...)

## S3 method for class 'integer'
dtt_date_time(x, tz = dtt_default_tz(), ...)

## S3 method for class 'double'
dtt_date_time(x, tz = dtt_default_tz(), ...)

## S3 method for class 'character'
dtt_date_time(x, tz = dtt_default_tz(), ...)

## S3 method for class 'Date'
dtt_date_time(x, time = hms::as_hms("00:00:00"), tz = dtt_default_tz(), ...)

## S3 method for class 'POSIXct'
dtt_date_time(x, tz = dtt_tz(x), ...)

## S3 method for class 'hms'
dtt_date_time(x, date = dtt_date("1970-01-01"), tz = dtt_default_tz(), ...)
```

**Arguments**

x	A vector.
...	Unused.
tz	A string of the time zone.
time	A hms vector of the time.
date	A Date vector of the date.

**Value**

A floored POSIXct vector.

**Methods (by class)**

- integer: Coerce integer vector to a floored POSIXct vector
- double: Coerce double vector to a floored POSIXct vector
- character: Coerce character vector to a floored POSIXct vector
- Date: Coerce Date vector to a floored POSIXct vector
- POSIXct: Coerce POSIXct vector to a floored POSIXct vector
- hms: Coerce hms vector to a floored POSIXct vector

**Examples**

```
dtc_date_time(1L)
dtc_date_time(-1)
dtc_date_time(1, tz = "Etc/GMT+8")
dtc_date_time(as.Date("2000-01-02"))
dtc_date_time(as.Date("2000-01-02"), time = hms::as_hms("04:05:06"))
```

---

dtc\_day

*Get and Set Day Values*

---

**Description**

Gets and sets day values for date/time vectors.

**Usage**

```
dtc_day(x, ...)

dtc_day(x) <- value

## S3 method for class 'Date'
dtc_day(x, ...)

## S3 method for class 'POSIXct'
dtc_day(x, ...)

## S3 replacement method for class 'Date'
dtc_day(x) <- value

## S3 replacement method for class 'POSIXct'
dtc_day(x) <- value

dtc_days(x, ...)

dtc_days(x) <- value

dtc_set_day(x, value)
```

**Arguments**

x                    A date/time vector.  
 ...                 Unused.  
 value                A integer vector of the day value(s).

**Value**

An integer vector (or the modified date/time vector).

**Methods (by class)**

- Date: Get integer vector of day values for a Date vector
- POSIXct: Get integer vector of day values for a POSIXct vector
- Date: Set day values for a Date vector
- POSIXct: Set day values for a POSIXct vector

**Examples**

```
x <- as.Date("1990-01-02")
dtt_day(x)
dtt_day(x) <- 27L
x

x <- as.POSIXct("1990-01-02 23:40:51")
dtt_day(x)
dtt_day(x) <- 27L
x
```

---

dtt\_dayte

*Dayte*

---

**Description**

Dayte

**Usage**

```
dtt_dayte(x, ...)
```

```
## S3 method for class 'Date'
dtt_dayte(x, start = 1L, ...)
```

```
## S3 method for class 'POSIXct'
dtt_dayte(x, start = 1L, ...)
```

**Arguments**

- x                    A date time vector.
- ...                    Unused.
- start                An integer scalar of the starting month or a Date scalar of the starting date.

**Value**

- A Date vector with the year set to year.
- A Date vector of the daytes.

**Methods (by class)**

- Date: Dayte a Date vector
- POSIXct: Dayte a POSIXct vector

**Examples**

```
dtc_daytc(as.Date(c("2001-01-01", "2015-12-13")))
```

---

dtc_daytc_time	<i>Dayte Time</i>
----------------	-------------------

---

**Description**

Dayte Time

**Usage**

```
dtc_daytc_time(x, ...)

## S3 method for class 'Date'
dtc_daytc_time(x, start = 1L, tz = dtc_default_tz(), ...)

## S3 method for class 'POSIXct'
dtc_daytc_time(x, start = 1L, ...)
```

**Arguments**

- x                    A date time vector.
- ...                    Unused.
- start                An integer scalar of the starting month or a Date scalar of the starting date.
- tz                    A string of the time zone.

**Value**

A Date vector with the year set to year.

A POSIXct vector of the dayte times.

**Methods (by class)**

- Date: Dayte Time a Date vector
- POSIXct: Dayte Time a POSIXct vector

**Examples**

```
dtt_dayte_time(as.POSIXct(c("2001-01-01 12:13:14", "2015-12-13"), tz = "Etc/GMT+10"))
```

---

dtt\_daytt

*Dayte Time*

---

**Description**

Dayte Time

**Usage**

```
dtt_daytt(x, start = 1L)
```

**Arguments**

x	A Date or POSIXct vector.
start	An integer vector specifying the start month of the year or a Date vector of the start dayte.

**Value**

A Date or POSIXct vector with the year for February 29th as 1972.

---

dtt_diff	<i>Time Difference</i>
----------	------------------------

---

**Description**

Gets the time difference in secs, minutes, hours, days or weeks. Uses `difftime()` but floors `x` and `y` first after coercing to `POSIXct` and adjusts the timezone of `y` to match that of `x`.

**Usage**

```
dtt_diff(x, y, units = "secs", as_difftime = FALSE)
```

**Arguments**

<code>x</code>	An object that can be coerced to a <code>POSIXct</code> using <code>dtt_date_time()</code> .
<code>y</code>	An object that can be coerced to a <code>POSIXct</code> using <code>dtt_date_time()</code> .
<code>units</code>	A string of the units. The possible values are "secs", "minutes", "hours", "days" or "weeks".
<code>as_difftime</code>	A flag specifying whether to return a <code>difftime</code> vector.

**Value**

A numeric vector of the time difference.

**Examples**

```
dtt_diff(as.Date(c("2001-01-02", "2000-12-31")), as.Date("2001-01-01"), "hours")
dtt_diff(as.Date("2001-01-02"), as.Date("2001-01-01"), "weeks")
```

---

dtt_doy	<i>Day of the Year</i>
---------	------------------------

---

**Description**

Day of the Year

**Usage**

```
dtt_doy(x, ...)
```

**Arguments**

<code>x</code>	A Date or <code>POSIXct</code> vector.
<code>...</code>	Unused.

**Value**

A integer vector between 1 and 366 of the day of the year.

**Examples**

```
dtt_doy(Sys.Date())
```

---

dtt_doy_to_date	<i>Day of the Year to Date</i>
-----------------	--------------------------------

---

**Description**

Day of the Year to Date

**Usage**

```
dtt_doy_to_date(x, year = 1972L)
```

**Arguments**

x	An integer vector of the Day of the Year.
year	An integer scalar or vector of the year.

**Value**

A Date vector.

**Examples**

```
dtt_doy_to_date(3)
```

---

dtt_feb29_to_28	<i>Feb 29 to Feb 28</i>
-----------------	-------------------------

---

**Description**

Converts Feb 29 to Feb 28th

**Usage**

```
dtt_feb29_to_28(x)
```

**Arguments**

x	A Date or POSIXct vector.
---	---------------------------

**Value**

The modified Date or POSIXct vector.

**Examples**

```
dtt_floor(as.Date("2004-02-29"))
```

---

dtt_floor	<i>Floor</i>
-----------	--------------

---

**Description**

Floors a date/time vector

**Usage**

```
dtt_floor(x, units, ...)

## S3 method for class 'Date'
dtt_floor(x, units = "days", ...)

## S3 method for class 'POSIXct'
dtt_floor(x, units = "seconds", ...)

## S3 method for class 'hms'
dtt_floor(x, units = "seconds", ...)
```

**Arguments**

x	A date/time vector.
units	A string of the units to floor by.
...	Unused.

**Value**

The floored date/time vector.

**Methods (by class)**

- Date: Floor a Date vector
- POSIXct: Floor a POSIXct vector
- hms: Floor a hms vector

**Examples**

```
dtt_floor(hms::as_hms("23:59:59"), "hours")
```

---

`dtt_floored`*Floored*

---

**Description**

Test whether a date time vector is floored.

**Usage**

```
dtt_floored(x, ...)  
  
## S3 method for class 'Date'  
dtt_floored(x, units = "days", ...)  
  
## S3 method for class 'POSIXct'  
dtt_floored(x, units = "seconds", ...)  
  
## S3 method for class 'hms'  
dtt_floored(x, units = "seconds", ...)
```

**Arguments**

<code>x</code>	A Date, POSIXct or hms vector.
<code>...</code>	Unused.
<code>units</code>	A string of the time units to floor by.

**Value**

A flag indicating whether floored.

**Methods (by class)**

- Date: Test if Date vector is floored
- POSIXct: Test if POSIXct vector is floored
- hms: Test if hms vector is floored

**Examples**

```
dtt_floored(as.Date("2002-02-01"))
```

---

dtc\_hours                      *Get and Set Hour Values*

---

### Description

Gets and sets hour values for date/time vectors.

### Usage

```
dtc_hours(x, ...)  
  
dtc_hours(x) <- value  
  
dtc_hour(x, ...)  
  
dtc_hour(x) <- value  
  
## S3 method for class 'Date'  
dtc_hour(x, ...)  
  
## S3 method for class 'POSIXct'  
dtc_hour(x, ...)  
  
## S3 method for class 'hms'  
dtc_hour(x, ...)  
  
## S3 replacement method for class 'POSIXct'  
dtc_hour(x) <- value  
  
## S3 replacement method for class 'hms'  
dtc_hour(x) <- value  
  
dtc_set_hour(x, value)
```

### Arguments

x	A date/time vector.
...	Unused.
value	A integer vector of the hour value(s).

### Value

An integer vector (or the modified date/time vector).

**Methods (by class)**

- Date: Get integer vector of hour values for a Date vector
- POSIXct: Get integer vector of hour values for a POSIXct vector
- hms: Get integer vector of hour values for a hms vector
- POSIXct: Set hour values for a POSIXct vector
- hms: Set hour values for a hms vector

**Examples**

```
x <- as.POSIXct("1990-01-02 23:40:51")
dtt_hour(x)
dtt_hour(x) <- 01L
x
```

```
x <- hms::as_hms("23:40:51")
dtt_hour(x)
dtt_hour(x) <- 01L
x
```

---

dtt\_is\_date

*Is Date*

---

**Description**

Is Date

**Usage**

```
dtt_is_date(x)
```

**Arguments**

x                   An R object.

**Value**

A flag indicating whether R is a Date vector.

---

dtl_is_date_time	<i>Is Date Time</i>
------------------	---------------------

---

**Description**

Is Date Time

**Usage**

```
dtl_is_date_time(x)
```

**Arguments**

x                    An R object.

**Value**

A flag indicating whether R is a POSIXct vector.

---

dtl_is_dtt	<i>Is Date or DateTime Object</i>
------------	-----------------------------------

---

**Description**

Is Date or DateTime Object

**Usage**

```
dtl_is_dtt(x)
```

**Arguments**

x                    An R object.

**Value**

A flag indicating whether R is a Date or POSIXct vector.

---

`dtt_minutes`*Get and Set Minute Values*

---

**Description**

Gets and sets minute values for date/time vectors.

**Usage**

```
dtt_minutes(x, ...)  
  
dtt_minutes(x) <- value  
  
dtt_minute(x, ...)  
  
dtt_minute(x) <- value  
  
## S3 method for class 'Date'  
dtt_minute(x, ...)  
  
## S3 method for class 'POSIXct'  
dtt_minute(x, ...)  
  
## S3 method for class 'hms'  
dtt_minute(x, ...)  
  
## S3 replacement method for class 'POSIXct'  
dtt_minute(x) <- value  
  
## S3 replacement method for class 'hms'  
dtt_minute(x) <- value  
  
dtt_set_minute(x, value)
```

**Arguments**

<code>x</code>	A date/time vector.
<code>...</code>	Unused.
<code>value</code>	A integer vector of the minute value(s).

**Value**

An integer vector (or the modified date/time vector).

**Methods (by class)**

- Date: Get integer vector of minute values for a Date vector
- POSIXct: Get integer vector of minute values for a POSIXct vector
- hms: Get integer vector of minute values for a hms vector
- POSIXct: Set minute values for a POSIXct vector
- hms: Set minute values for a hms vector

**Examples**

```
x <- as.POSIXct("1990-01-02 23:40:51")
dtm_minute(x)
dtm_minute(x) <- 27L
x
```

```
x <- hms::as_hms("23:40:51")
dtm_minute(x)
dtm_minute(x) <- 27L
x
```

---

dtm\_months

*Get and Set Month Values*

---

**Description**

Gets and sets month values for date/time vectors.

**Usage**

```
dtm_months(x, ...)
```

```
dtm_months(x) <- value
```

```
dtm_month(x, ...)
```

```
dtm_month(x) <- value
```

```
## S3 method for class 'Date'
dtm_month(x, ...)
```

```
## S3 method for class 'POSIXct'
dtm_month(x, ...)
```

```
## S3 replacement method for class 'Date'
dtm_month(x) <- value
```

```
## S3 replacement method for class 'POSIXct'
```

```
dtt_month(x) <- value
dtt_set_month(x, value)
```

### Arguments

x	A date/time vector.
...	Unused.
value	A integer vector of the month value(s).

### Value

An integer vector (or the modified date/time vector).

### Methods (by class)

- Date: Get integer vector of month values for a Date vector
- POSIXct: Get integer vector of month values for a POSIXct vector
- Date: Set month values for a Date vector
- POSIXct: Set month values for a POSIXct vector

### Examples

```
x <- as.Date("1990-01-02")
dtt_month(x)
dtt_month(x) <- 11L
x

x <- as.POSIXct("1990-01-02 23:40:51")
dtt_month(x)
dtt_month(x) <- 11L
x
```

---

dtt_season	<i>Season</i>
------------	---------------

---

### Description

Returns a factor of the user specified seasons.

### Usage

```
dtt_season(
  x,
  start = c(Spring = 3L, Summer = 6L, Autumn = 9L, Winter = 12L),
  first = NULL
)
```

**Arguments**

<code>x</code>	A Date or POSIXct vector
<code>start</code>	A uniquely named integer vector of the first month of each season or a uniquely named Date vector of the first date of each season.
<code>first</code>	A string of the name of first season or NULL in which case the first season is that which includes Jan 1st.

**Details**

If the first month of the first season isn't January (1L), then the last season is considered to wrap into the following year.

**Value**

A factor of the seasons.

**Examples**

```
dates <- as.Date(c("2001-01-01", "2001-02-28", "2012-09-01", "2012-12-01"))
dtt_season(dates)
dtt_season(dates, start = c(Monsoon = 2L, `Dry Period` = 6L))
dtt_season(dates, start = c(First = dtt_date("2000-01-01"), Second = dtt_date("2000-06-01")))
```

---

dtt\_seconds

*Get and Set Second Values*

---

**Description**

Gets and sets second values for date/time vectors.

**Usage**

```
dtt_seconds(x, ...)

dtt_seconds(x) <- value

dtt_second(x, ...)

dtt_second(x) <- value

## S3 method for class 'Date'
dtt_second(x, ...)

## S3 method for class 'POSIXct'
dtt_second(x, ...)

## S3 method for class 'hms'
```

```
dtt_second(x, ...)  
  
## S3 replacement method for class 'POSIXct'  
dtt_second(x) <- value  
  
## S3 replacement method for class 'hms'  
dtt_second(x) <- value  
  
dtt_set_second(x, value)
```

### Arguments

x	A date/time vector.
...	Unused.
value	A integer vector of the second value(s).

### Value

An integer vector (or the modified date/time vector).

### Methods (by class)

- Date: Get integer vector of second values for a Date vector
- POSIXct: Get integer vector of second values for a POSIXct vector
- hms: Get integer vector of second values for a time vector
- POSIXct: Set second values for a POSIXct vector
- hms: Set second values for a hms vector

### Examples

```
x <- as.POSIXct("1990-01-02 23:40:51")  
dtt_second(x)  
dtt_second(x) <- 27L  
x  
  
x <- hms::as_hms("23:40:51")  
dtt_second(x)  
dtt_second(x) <- 27L  
x
```

---

dtc\_seq                      *Sequence*

---

### Description

Creates a date/time sequence vector. from and to are first floored and then a sequence is created by units. If length\_out is defined then that number of units are added to from.

### Usage

```
dtc_seq(from, to, units, length_out = NULL, ...)

## S3 method for class 'Date'
dtc_seq(from, to = from, units = "days", length_out = NULL, ...)

## S3 method for class 'POSIXct'
dtc_seq(from, to = from, units = "seconds", length_out = NULL, ...)

## S3 method for class 'hms'
dtc_seq(
  from,
  to = from,
  units = "seconds",
  length_out = NULL,
  wrap = TRUE,
  ...
)
```

### Arguments

from	A date/time scalar of the start.
to	A date/time scalar of the end.
units	A string of the time units.
length_out	An integer of the number of units from from.
...	Unused
wrap	A flag specifying whether to wrap hms vectors from 23:59:59 to 00:00:00

### Value

The date/time vector.

### Methods (by class)

- Date: Create a Date sequence vector
- POSIXct: Create a POSIXct sequence vector
- hms: Create a hms sequence vector

**Examples**

```
dtt_seq(as.Date("2001-01-01"), as.Date("2001-01-05"))
```

---

dtt_set_time	<i>Time</i>
--------------	-------------

---

**Description**

Coerces vectors to floored (and wrapped) hms vectors.

**Usage**

```
dtt_set_time(x, value)

dtt_time(x, ...)

dtt_time(x) <- value

## S3 method for class 'integer'
dtt_time(x, ...)

## S3 method for class 'double'
dtt_time(x, ...)

## S3 method for class 'character'
dtt_time(x, ...)

## S3 method for class 'Date'
dtt_time(x, ...)

## S3 method for class 'hms'
dtt_time(x, ...)

## S3 method for class 'POSIXct'
dtt_time(x, ...)

## S3 method for class 'POSIXlt'
dtt_time(x, ...)
```

**Arguments**

x	A vector.
value	A time vector.
...	Unused.

**Value**

A floored hms vector.

**Methods (by class)**

- integer: Coerce integer vector to a floored hms vector
- double: Coerce double vector to a floored hms vector
- character: Coerce character vector to a floored hms vector
- Date: Coerce Date vector to a floored hms vector
- hms: Coerce hms vector to a floored hms vector
- POSIXct: Coerce POSIXct vector to a floored hms vector
- POSIXlt: Coerce POSIXlt vector to a floored hms vector

**Examples**

```
dtt_time(1L)
dtt_time(1.999)
dtt_time(-0.001)
dtt_time(Sys.Date())
dtt_time(as.POSIXct("2001-01-01 02:30:40"))
dtt_time(as.POSIXct("2001-01-01 02:30:40", tz = "Etc/GMT-8"))
```

---

dtt\_set\_tz

*Set Time Zone*

---

**Description**

Sets the time zone for a date time vector without adjusting the clock time. Equivalent to `lubridate::force_tz()`.

**Usage**

```
dtt_set_tz(x, tz = dtt_default_tz(), ...)
```

```
## S3 method for class 'POSIXct'
dtt_set_tz(x, tz = dtt_default_tz(), ...)
```

**Arguments**

x	A date time vector.
tz	A string of the new time zone.
...	Unused.

**Value**

The date time vector with the new time zone.

**Methods (by class)**

- POSIXct: Set the time zone for a POSIXct vector

**See Also**

[dtt\\_adjust\\_tz\(\)](#)

**Examples**

```
dtt_set_tz(as.POSIXct("1970-01-01", tz = "Etc/GMT+8"), tz = "UTC")
```

---

dtt_study_year	<i>Study Year</i>
----------------	-------------------

---

**Description**

Study Year

**Usage**

```
dtt_study_year(x, start = 1L, full = TRUE)
```

**Arguments**

x	A Date or POSIXct vector.
start	An integer vector of the starting month or a Date vector of the starting date.
full	A flag specifying whether to return a character vector of the study years (or an integer vector of the first year)

**Value**

A character vector of the study year or an integer vector of the first year.

**Examples**

```
dtt_study_year(as.Date(c("2000-03-31", "2000-04-01", "2001-04-01")), start = 4L)
dtt_study_year(as.Date(c("2000-03-31", "2000-04-01", "2001-04-01")), start = 4L, full = FALSE)
```

---

dtl\_subtract\_units      *Subtract Units*

---

**Description**

Subtract time units from a date time vector.

**Usage**

```
dtl_subtract_units(x, n = 1L, units = dtl_units(x))
```

```
dtl_subtract_years(x, n = 1L)
```

```
dtl_subtract_months(x, n = 1L)
```

```
dtl_subtract_days(x, n = 1L)
```

```
dtl_subtract_hours(x, n = 1L)
```

```
dtl_subtract_minutes(x, n = 1L)
```

```
dtl_subtract_seconds(x, n = 1L)
```

**Arguments**

x	A date time vector.
n	An integer of the number of units.
units	A string of the units.

**Value**

The modified date time vector.

**See Also**

[dtl\\_add\\_units\(\)](#)

**Examples**

```
dtl_subtract_units(as.Date("1999-12-31"), 2L, "days")
```

---

dtt_sys_date	<i>Get System Date</i>
--------------	------------------------

---

**Description**

Get System Date

**Usage**

```
dtt_sys_date(tz = dtt_default_tz())
```

**Arguments**

tz                    A string of the time zone.

**Value**

A floored Date scalar.

**Examples**

```
## Not run:  
dtt_set_default_tz("Etc/GMT+12")  
dtt_sys_date()  
dtt_set_default_tz("Etc/GMT-12")  
dtt_sys_date()  
dtt_sys_date(tz = "Etc/GMT+12")  
  
## End(Not run)
```

---

dtt_sys_date_time	<i>Get System Date Time</i>
-------------------	-----------------------------

---

**Description**

Get System Date Time

**Usage**

```
dtt_sys_date_time(tz = dtt_default_tz())
```

**Arguments**

tz                    A string of the time zone.

**Value**

A floored POSIXct scalar.

**Examples**

```
## Not run:
dtt_set_default_tz("UTC")
dtt_sys_date_time()
dtt_set_default_tz("Etc/GMT+8")
dtt_sys_date_time()
dtt_sys_date_time(tz = "UTC")

## End(Not run)
```

---

dtt_sys_time	<i>Get System Time</i>
--------------	------------------------

---

**Description**

Get System Time

**Usage**

```
dtt_sys_time(tz = dtt_default_tz())
```

**Arguments**

tz                   A string of the time zone.

**Value**

A floored hms scalar.

**Examples**

```
## Not run:
dtt_sys_time()

## End(Not run)
```

---

dtt_sys_tz	<i>Get, Set or Reset Default Time Zone</i>
------------	--

---

### Description

Get, Set or Reset Default Time Zone

### Usage

```
dtt_sys_tz()
```

```
dtt_set_sys_tz(tz = NULL)
```

```
dtt_reset_sys_tz()
```

```
dtt_default_tz()
```

```
dtt_set_default_tz(tz = NULL)
```

```
dtt_reset_default_tz()
```

### Arguments

tz                    A string of the time zone.

### Value

A string of the current or old time zone.

### Functions

- dtt\_set\_default\_tz: Set Default Time Zone
- dtt\_reset\_default\_tz: Reset Default Time Zone

### Examples

```
## Not run:  
dtt_default_tz()  
old <- dtt_set_default_tz("Etc/GMT+8")  
dtt_default_tz()  
dtt_reset_default_tz()  
dtt_default_tz()  
dtt_set_default_tz(old)  
dtt_default_tz()  
  
## End(Not run)
```

---

dtl_tz	<i>Get, Set or Adjust Time Zone</i>
--------	-------------------------------------

---

### Description

Gets, sets or the time zone for a date time vector.

### Usage

```
dtl_tz(x, ...)  
  
## S3 method for class 'POSIXct'  
dtl_tz(x, ...)
```

### Arguments

x	A date time vector.
...	Unused.

### Value

A string of the time zone.

### Methods (by class)

- POSIXct: Get the time zone for a POSIXct vector.

### Examples

```
dtl_tz(as.POSIXct("1970-01-01", tz = "Etc/GMT+8"))
```

---

dtl_units	<i>Get Units</i>
-----------	------------------

---

### Description

Gets the smallest units for a date time vector. The possible values are 'seconds', 'minutes', 'hours', 'days', 'months' or 'years'.

**Usage**

```
dtt_units(x, ...)
```

```
## S3 method for class 'Date'
```

```
dtt_units(x, ...)
```

```
## S3 method for class 'POSIXct'
```

```
dtt_units(x, ...)
```

```
## S3 method for class 'hms'
```

```
dtt_units(x, ...)
```

**Arguments**

x	A Date, POSIXct or hms vector.
...	Unused.

**Value**

A string indicating the date time units.

**Methods (by class)**

- Date: Get time units for a Date vector
- POSIXct: Get time units for a POSIXct vector
- hms: Get time units for a hms vector

**Examples**

```
dtt_units(as.Date("2000-01-01"))
```

```
dtt_units(as.Date("2000-02-01"))
```

```
dtt_units(as.Date("2000-01-02"))
```

---

dtt_units_per_unit	<i>Units per Unit</i>
--------------------	-----------------------

---

**Description**

Units per Unit

**Usage**

```
dtt_units_per_unit(units = "seconds", unit = "days")
```

**Arguments**

units	A string of the time units.
unit	A string of the time unit.

**Value**

A number of the units per unit

**Examples**

```
dtt_units_per_unit("hours")
```

---

dtt\_wday

*Get Week Day*

---

**Description**

Gets the week days for the locale.

**Usage**

```
dtt_wday(x, abbr = FALSE, ...)
```

```
## Default S3 method:
```

```
dtt_wday(x, abbr = FALSE, ...)
```

**Arguments**

x	A date/time vector.
abbr	A flag specifying whether to abbreviate the week days.
...	Unused.

**Value**

An character vector of the week days.

**Methods (by class)**

- default: Get character vector of week days for a Date vector

**Examples**

```
x <- as.Date("1990-01-02")  
dtt_wday(x)
```

```
x <- as.POSIXct("1990-01-02 23:40:51")  
dtt_wday(x, abbr = TRUE)
```

---

dtt_wrap	<i>Wrap</i>
----------	-------------

---

**Description**

Wrap

**Usage**

```
dtt_wrap(x, ...)
```

**Arguments**

x	A date/time vector.
...	Unused.

**Examples**

```
dtt_wrap(hms::as_hms("24:00:00"))
```

---

dtt_years	<i>Get and Set Year Values</i>
-----------	--------------------------------

---

**Description**

Gets and sets year values for date/time vectors.

**Usage**

```
dtt_years(x, ...)  
  
dtt_years(x) <- value  
  
dtt_set_year(x, value)  
  
dtt_year(x, ...)  
  
dtt_year(x) <- value  
  
## S3 method for class 'Date'  
dtt_year(x, ...)  
  
## S3 method for class 'POSIXct'  
dtt_year(x, ...)
```

```
## S3 replacement method for class 'Date'  
dtt_year(x) <- value  
  
## S3 replacement method for class 'POSIXct'  
dtt_year(x) <- value
```

### Arguments

x	A date/time vector.
...	Unused.
value	A integer vector of the year value(s).

### Value

An integer vector (or the modified date/time vector).

### Methods (by class)

- Date: Get integer vector of year values for a Date vector
- POSIXct: Get integer vector of year values for a POSIXct vector
- Date: Set year values for a Date vector
- POSIXct: Set year values for a POSIXct vector

### Examples

```
x <- as.Date("1990-01-02")  
dtt_year(x)  
dtt_year(x) <- 11L  
x  
  
x <- as.POSIXct("1990-01-02 23:40:51")  
dtt_year(x)  
dtt_year(x) <- 2022L  
x
```

---

is\_date\_time

*Is Date/Time*

---

### Description

Tests whether an object is a Date, POSIXct, or hms vector.

**Usage**

```
is.POSIXct(x)
is_date_time(x)
is.Date(x)
is_date(x)
is.hms(x)
is_time(x)
```

**Arguments**

x                    An object

**Value**

A flag indicating whether x inherits from Date, POSIXct or hms.

---

NA_Date_	<i>Missing Date</i>
----------	---------------------

---

**Description**

A missing Date object

**Usage**

```
NA_Date_
```

**Format**

An object of class Date of length 1.

---

NA_hms_	<i>Missing hms</i>
---------	--------------------

---

**Description**

A missing hms object

**Usage**

NA\_hms\_

**Format**

An object of class hms (inherits from difftime) of length 1.

---

NA_POSIXct_	<i>Missing POSIXct</i>
-------------	------------------------

---

**Description**

A missing POSIXct object

**Usage**

NA\_POSIXct\_

**Format**

An object of class POSIXct (inherits from POSIXt) of length 1.

---

vld_time	<i>Validate Time</i>
----------	----------------------

---

**Description**

Validates that an object is scalar `hms::hms` object using `inherits(x, class) && length(x) == 1L && !anyNA(x)`.

**Usage**

`vld_time(x)`

**Arguments**

`x` The object to check.

**Value**

A flag indicating whether the condition was met.

**See Also**

[chk\\_time\(\)](#)

**Examples**

```
vld_time(1)  
vld_time(hms::as_hms("10:12:59"))
```
