Package ‘sbtools’

July 20, 2021

Title USGS ScienceBase Tools
Maintainer David Blodgett <dblodgett@usgs.gov>
Version 1.1.17
Description Tools for interacting with U.S. Geological Survey ScienceBase
<https://www.sciencebase.gov> interfaces. ScienceBase is a data cataloging and
 collaborative data management platform. Functions included for querying
 ScienceBase, and creating and fetching datasets.
Imports jsonlite, curl, httr (>= 1.0.0), stringr, methods
Suggests testthat, xml2, sf, sp
License CC0
URL https://github.com/USGS-R/sbtools

Index 45
sbtools-package  R interface to ScienceBase

Description

This package provides a rich interface to USGS’s ScienceBase [https://www.sciencebase.gov/](https://www.sciencebase.gov/) - a data cataloging and collaborative data management platform. For further information, see the sbtools manuscript [here](https://example.com).

Functions are included for searching for data, retrieving, creating, and updating datasets.

Details

Functionality in this package allows all users to query ScienceBase for data using a variety of metadata types (`query_sb_text`, `query_sb_doi`, `query_sb.spatial`). Items and associated information can be requested by `item_get` including item parents `item_get_parent` and children `item_list_children`. Data and attached files can be accessed for all available items through provided functionality (e.g., `item_get_wfs` and `item_file_download`).

Authentication

See the function `authenticate_sb` to authenticate. You’ll be required to pass in your ScienceBase username and password.

Authenticated users can create, update, and remove items (`item_list_children`, `item_list_children`, `item_create`, `item_update`, `item_rm`).

Feedback

Report any feedback or bugs at [https://github.com/USGS-R/sbtools/issues](https://github.com/USGS-R/sbtools/issues)

```r
authenticate_sb(username, password)
```

Arguments

- `username`  
  Sciencebase username
- `password`  
  Sciencebase password, prompts user if not supplied
current_session    Return current cached session

**Description**

Returns the currently cached SB session. If there is no authenticated session, returns NULL. Emits a warning if the session has expired.

**Usage**

```python
current_session()
```

**Examples**

```python
session = current_session()
#null unless currently authenticated
session
```

---

**folder_create**    Create a folder

**Description**

Create a special kind of item on ScienceBase that is intended to be a "folder" that contains one or more child items. This is similar to a standard item (**item_create**) but defaults to showing child-items on the ScienceBase web interface.

**Usage**

```python
folder_create(parent_id = user_id(), name, ..., session = current_session())
```

**Arguments**

- `parent_id`: An `sbitem` object or character ScienceBase ID corresponding to the parent item (folder)
- `name`: (character) the folder name
- `...`: Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
- `session`: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

**Value**

A `response` object
**identifier_exists**

### Examples

```r
## Not run:
folder_create(name="foobar345")

## End(Not run)
```

---

**identifier_exists**  
*Check if identifier exists*

### Description

This function quickly checks to see if an identifier exists. It does a quick head request to skip the overhead of item metadata retrieval. This will also return `FALSE` if the identifier exists but is associated with an item that is unavailable due to permission restrictions.

### Usage

```r
identifier_exists(sb_id, ..., session = current_session())
```

### Arguments

- **sb_id**
  - An `sbitem` object or a character ScienceBase ID corresponding to the item
- **...**
  - Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
- **session**
  - Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

### Value

Logical, `TRUE` or `FALSE`

### Examples

```r
# identifier exists
identifier_exists(sb_id = "4f4e4b24e4b07f02db6aea14")

# identifier does not exist
identifier_exists(sb_id = "aaaaaaaaakkkkkbbbbb")
```
is_logged_in  Check whether you’re logged into a ScienceBase session

Description
Check whether you’re logged into a ScienceBase session

Usage
is_logged_in(..., session = current_session())

Arguments
...
session  SB session object from authenticate_sb

Value
Logical, TRUE or FALSE

Examples
## Not run:
is_logged_in()
## End(Not run)

items_create  Create many new SB items

Description
A method to create multiple ScienceBase items with a single call and a single HTTP service request. Can be useful for improving performance of creating a large number of items at once.

Usage
items_create(
  parent_id = user_id(),
  title,
  ...
  info = NULL,
  session = current_session()
)

items_create

Arguments

parent_id  An `sbitem` object or character ScienceBase ID corresponding to the parent item (folder). This must be of length 1 or more. If length 1, then we recycle it for every item.
title  Two or more titles for the new SB items
...  Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
info  (optional) list of metadata info for the new items. for each item include a named list of variables
session  Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

Details

The length of the `title` and `info` values must be the same length - however, the `parent_id` can be of length 1 or equal to the length of each of `title` and `info` parameters

Value

One or more objects of class `sbitem` in a list

Examples

```r
## Not run:
# helper function to make a random name
aname <- function() paste0(sample(letters, size = 5, replace = TRUE), collapse = "")

# Create some items - by default we use your user ID
items_create(title = c(aname(), aname()))

# add additional items in the info parameter - by default we use your user ID
items_create(title = c(aname(), aname())),
info = list(
  list(contacts = list(list(name = "Suzy")));
  list(contacts = list(list(name = "Brandy")))
)

# another example with more information - by default we use your user ID
items_create(title = c(aname(), aname())),
info = list(
  list(contacts = list(list(name = "Suzy")));
  list(contacts = list(list(name = "Brandy")))
)

# Pass an object of class sbitem
(x <- folder_create(user_id(), aname()))
items_create(x, title = c(aname(), aname()))
```

## End(Not run)
items_update  
Update many SB items with new metadata

Description
A method to update multiple ScienceBase items with a single call and a single HTTP service request. Can be useful for improving performance of updating a large number of items at once.

Usage
items_update(sb_id, info, ... , session = current_session())

Arguments
- sb_id: An sbitem object or a character ScienceBase ID corresponding to the item
- info: list of metadata info (key-value pairs) to change on the item
- ...: Additional parameters are passed on to PUT
- session: Session object from authenticate_sb. Defaults to anonymous or last authenticated session

Details
If length of sb_id > 1, then length of info input must be the same

Value
One or more objects of class sbitem in a list

Examples
```r
## Not run:
# helper function to make a random name
aname <- function() paste0(sample(letters, size = 5, replace = TRUE), collapse = "")
res <- items_create(user_id(), title = c(aname(), aname()))
out <- items_update(res, info = list( list(title = aname()), list(title = aname()) ) )
vapply(out, "[[", "", "title")
## End(Not run)
```
items_upsert

Upsert many SB items

Description

Either creates or updates (if items already exist)

Usage

```r
items_upsert(
    parent_id = user_id(),
    title = NULL,
    ..., info = NULL,
    session = current_session()
)
```

Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>parent_id</td>
<td>An sbitem object or character ScienceBase ID corresponding to the parent item (folder)</td>
</tr>
<tr>
<td>title</td>
<td>The title of the new SB item</td>
</tr>
<tr>
<td>...</td>
<td>Additional parameters are passed on to GET, POST, HEAD, PUT, or DELETE</td>
</tr>
<tr>
<td>info</td>
<td>(optional) list of metadata info for the new item</td>
</tr>
<tr>
<td>session</td>
<td>Session object from authenticate_sb. Defaults to anonymous or last authenticated session</td>
</tr>
</tbody>
</table>

Value

An object of class sbitem

Examples

```r
## Not run:
# helper function to make a random name
aname <- function() paste0(sample(letters, size = 5, replace = TRUE), collapse = "")

# Create some item - by default we use your user ID
z1 <- item_create(title = aname())
z2 <- item_create(title = aname())

# Upsert items
(x <- items_upsert(list(z1, z2), title = c(aname(), aname())))

# Call item_upsert again, updates this time
items_upsert(x, info = list(contacts = list(list(name = "Suzy"))))
```
## item_append_files

### Upload File to Item

#### Description

Adds a file to an item

#### Usage

```r
item_append_files(
  sb_id,
  files,
  ..., 
  scrape_files = TRUE,
  session = current_session()
)
```

#### Arguments

- **sb_id**: An `sbitem` object or a character ScienceBase ID corresponding to the item
- **files**: A string vector of paths to files to be uploaded
- **...**: Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
- **scrape_files**: logical should the files be scraped for metadata? If TRUE, sciencebase will attempt to create extensions based on the files.
- **session**: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

#### Value

An object of class `sbitem`

#### Examples

```r
## Not run:
res <- item_create(user_id(), "testing 123")
cat("foo bar", file = "foobartxt")
item_append_files(res$id, "foobartxt")
## End(Not run)
```
Create a new SB item

Create a new item on ScienceBase with the requested parent and item title. Info can be provided to populate metadata at the time of creation.

Usage

```r
df_create(
  parent_id = user_id(),
  title, ...
  info,
  session = current_session()
)
```

Arguments

- `parent_id`  
  An `sbitem` object or character ScienceBase ID corresponding to the parent item (folder)
- `title`  
  The title of the new SB item
- `...`  
  Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
- `info` (optional)  
  List of metadata info for the new item
- `session`  
  Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

Value

An object of class `sbitem`

Examples

```r
## Not run:
# Create an item - by default we use your user ID
item_create(title = "testing 123")

# Pass an object of class sbitem
x <- folder_create(user_id(), "foobar456")
item_create(x, "foobar456-item")

## End(Not run)
```
item_exists        \hspace{2em} check if identifier tuple already exists on SB

Description

returns TRUE if tuple already belongs to a sciencebase item, FALSE if not

Usage

\begin{verbatim}
item_exists(scheme, type, key, ..., session = current_session())
\end{verbatim}

Arguments

\begin{itemize}
\item scheme\hspace{1cm}the identifier scheme
\item type \hspace{1cm}the identifier type
\item key \hspace{1cm}the identifier key
\item ...\hspace{1cm}Additional parameters are passed on to GET
\item session\hspace{1cm}an SB session
\end{itemize}

Value

boolean for whether item exists

Examples

\begin{verbatim}
## Not run:
item_exists('mda_streams','ts_doobs','nwis_01018035')
item_exists('mda_streams','site_root','nwis_01018035')

## End(Not run)
\end{verbatim}

item_file_download    \hspace{2em} Download files attached to item

Description

Function to download files attached to an item on SB. Either files can be specified directly using the names and destinations parameters, or a dest_dir can be supplied where all attached files will be written with the names as stored on SB.
Usage

item_file_download(
  sb_id,
  ..., 
  names, 
  destinations, 
  dest_dir, 
  session = current_session(),
  overwrite_file = FALSE 
)

Arguments

sb_id          An sbitem object or a character ScienceBase ID corresponding to the item
...            Additional parameters are passed on to GET, POST, HEAD, PUT, or DELETE
names          String vector list of file names attached to item that you wish to download.
destinations   String vector list of destinations for requested files. Must be same length as names
dest_dir       A directory path for saving files when names parameter is omitted
session        Session object from authenticate_sb. Defaults to anonymous or last authenticated session
overwrite_file Boolean indicating if file should be overwritten if it already exists locally

Value

Character vector of full paths to local files

Author(s)

Luke Winslow

Examples

### Not run:

#downloads two files attached to this item
item_file_download('548b2b31e4b03f6463662a4', dest_dir=tempdir())

#downloads a specific file attached to this item
item_file_download('548b2b31e4b03f6463662a4', names='gdp.txt',
  destinations=file.path(tempdir(), 'fname.txt'))

### End(Not run)
### item_get

Retrieves an item and its metadata from ScienceBase based on its unique ID. Errors if the requested item ID does not exist or access is restricted due to permissions.

#### Usage

```r
item_get(sb_id, ..., session = current_session())
```

#### Arguments

- **sb_id**: An `sbitem` object or a character ScienceBase ID corresponding to the item
- **...**: Additional parameters are passed on to `GET, POST, HEAD, PUT, or DELETE`
- **session**: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

#### Value

An object of class `sbitem`

#### Examples

```r
# Get an item
item_get("4f4e4b24e4b07f02db6aea14")

# Search for item IDs, then pass to item_get
library("httr")
res <- query_items(list(s = "Search", q = "water", format = "json"))
if(res$status != 404) {
  ids <- vapply(httr::content(res)$items, ":[[", ":"", ":id"
  lapply(ids[1:3], item_get)
}
```
**item_get_fields**  
*Retrieve specific fields from an SB item*

**Description**

Retrieve specific fields from an SB item

**Usage**

```r
item_get_fields(sb_id, fields, ..., drop = TRUE, session = current_session())
```

**Arguments**

- **sb_id**: An `sbitem` object or a character ScienceBase ID corresponding to the item
- **fields**: A vector of fields
- **...**: Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
- **drop**: Logical. If only one field is selected, should the list format be dropped?
- **session**: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

**Value**

List serialization of chosen metadata for an SB item

**Examples**

```r
# Get certain fields from an item
item_get_fields("4f4e4b24e4b07f02db6aea14", c('title', 'citation', 'contacts'))

# If only 1 field selection, do or don't drop list format
item_get_fields("4f4e4b24e4b07f02db6aea14", 'title')
item_get_fields("4f4e4b24e4b07f02db6aea14", 'title', drop = FALSE)
```

**item_get_parent**  
*Get an item's parent ID*

**Description**

Retrieves the parent of a supplied item based on the ScienceBase item tree hierarchy.

**Usage**

```r
item_get_parent(sb_id, ..., session = current_session())
```
item_get_wfs

Arguments

sb_id  An sbitem object or a character ScienceBase ID corresponding to the item
...
session  Session object from authenticate_sb. Defaults to anonymous or last authenticated session

Value

An item object representing the parent of the supplied item.

Examples

item_get_parent("4f4e4b24e4b07f02db6aea14")

item_get_parent(item_get("4f4e4b24e4b07f02db6aea14"))

Description

This function attempts to download the spatial layer data attached to the requested SB item. SB exposes discrete spatial objects (points, polygons) as web services based on the Open Geospatial Consortium, Web Feature Service (WFS) standardized interface. This requires the following libraries not by default installed with sbtools: sf, httr, and xml2. You can install them simply by running install.packages(c("xml2", "httr", "sf"))

Usage

item_get_wfs(sb_id, as_sf = FALSE, ..., session)

Arguments

sb_id  An sbitem object or a character ScienceBase ID corresponding to the item
as_sf  boolean, return data in sf format
...
session  Session object from authenticate_sb. Defaults to anonymous or last authenticated session
item_list_children  

Return IDs for all child items

Description

Returns a list of child IDs for a ScienceBase item

Usage

```r
item_list_children(
  sb_id,
  fields = c("id", "title"),
  ..., 
  session = current_session(),
  limit = 20
)
```

Arguments

- **sb_id**: An `sbitem` object or a character ScienceBase ID corresponding to the item
- **fields**: A character vector of requested data fields. Defaults to 'id' and 'title'. Full list of possible fields is available online in SB documentation.
- **...**: Additional parameters are passed on to GET, POST, HEAD, PUT, or DELETE
- **session**: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session
- **limit**: Max children returned.

Value

List of `sbitem` for each child item.

Examples

```r
## Not run:
item_list_children(user_id())
## End(Not run)

item_list_children(as.sbitem('/quotesingle.Var5060b03ae4b00fc20c4f3c8b/'))
item_list_children(item_get('/quotesingle.Var5060b03ae4b00fc20c4f3c8b/'))
```
item_list_files

Get list of files attached to SB item

Description

Lists all files attached to a SB item. Files can be downloaded from ScienceBase using item_file_download. (advanced) Recursive options lists all files attached to an item and all children items.

Usage

item_list_files(sb_id, recursive = FALSE, ..., session = current_session())

Arguments

- **sb_id**: An sbitem object or a character ScienceBase ID corresponding to the item
- **recursive** (logical): List files recursively. Default: FALSE
- **...**: Additional parameters are passed on to GET, POST, HEAD, PUT, or DELETE
- **session**: Session object from authenticate_sb. Defaults to anonymous or last authenticated session

Value

A data.frame with columns fname, size, and url. If item has no attached files, returns a zero row data.frame.

Examples

```r
## Not run:
item_list_files("4f4e4b24e4b07f02db6aea14") # list files recursively
## create item
id <- item_create(user_id(), title="some title")
## 1. create nested item w/ file
file <- system.file("examples", "books.json", package = "sbtools")
id2 <- item_create(id, title = "newest-thing")
item_upload_create(id2, file)
## 2. create nested item w/ file
file <- system.file("examples", "species.json", package = "sbtools")
id3 <- item_create(id, title = "a-new-thing")
item_upload_create(id3, file)
## 3. create nested item w/ file
file <- system.file("examples", "data.csv", package = "sbtools")
id4 <- item_create(id, title = "another-thing")
item_upload_create(id4, file)
item_list_files(id = '56562348e4b071e7ea53e09d', recursive = FALSE) # default
item_list_files(id = '56562348e4b071e7ea53e09d', recursive = TRUE)
```

## End(Not run)
item_move

Move item from one folder to another

Description

Move item from one folder to another

Usage

item_move(sb_id, id_new, ..., session = current_session())

Arguments

- **sb_id**: An `sbitem` object or a character ScienceBase ID corresponding to the item
- **id_new**: Folder/item to move id to. A ScienceBase ID or something that can be coerced to a SB item ID by `as.sbitem`
- **...**: Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
- **session**: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

Value

An object of class `sbitem`. Same as `id`, but with new parent `id`

Examples

```r
## Not run:
# create 1st folder
(fold1 <- folder_create(user_id(), "bear123"))
(res <- item_create(fold1, "item-to-move"))

# create 2nd folder
(fold2 <- folder_create(user_id(), "bear456"))

# move item in 1st folder to 2nd folder
(res2 <- item_move(res, fold2))

# test identical
identical(res2$parentId, fold2$id)
## End(Not run)
```
item_rename_files  Rename item attached files

Description

Renames files attached to an SB item.

Usage

item_rename_files(sb_id, names, new_names, ..., session = current_session())

Arguments

- **sb_id**: An sbitem object or a character ScienceBase ID corresponding to the item
- **names**: List of names of files to rename
- **new_names**: List of new file names to use
- **...**: Additional parameters are passed on to GET, POST, HEAD, PUT, or DELETE
- **session**: Session object from authenticate_sb. Defaults to anonymous or last authenticated session

Examples

```r
## Not run:
names = c("/quotesingle.Var file1.txt", "/quotesingle.Var file2.txt")
new_names = c("/quotesingle.Var newname1.txt", "/quotesingle.Var newname2.txt")

item_rename_files("sbid", names, new_names)

## End(Not run)
```

item_replace_files  Replace files associated with an item

Description

replaces existing files associated with an item with a new one. (Currently does not support multi-file uploads.) This function will not append an existing collection of files. If that is desired, use item_append_files

Usage

item_replace_files(sb_id, files, ..., all = FALSE, session = current_session())
Arguments

- **sb_id**: An `sbitem` object or a character ScienceBase ID corresponding to the item
- **files**: A character vector of file paths
- **all**: A boolean indicating if all attached files should be removed before uploading new files. FALSE if only files with matching names should be replaced. If you wish to upload files with duplicate names, see `item_append_files`. Defaults to FALSE.
- **session**: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

**Description**

Remove an item from ScienceBase. This is not reversible and will delete an item and its attached files. (advanced) Recursive is to be used with care and could result in unexpected file deletion.

**Usage**

```r
df <- item_rm(
  sb_id,
  ...,
  limit = 1000,
  recursive = FALSE,
  session = current_session()
)
```

**Arguments**

- **sb_id**: An `sbitem` object or a character ScienceBase ID corresponding to the item
- **...**: Additional parameters are passed on to GET, POST, HEAD, PUT, or DELETE
- **limit**: The maximum number of child items to remove when called with recursive=TRUE.
- **recursive**: logical, FALSE by default. CAUTION: setting recursive=TRUE means that not only will this item be deleted, but so will all its child items and their child items and so on.
- **session**: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

**Value**

- **httr response** object
Examples

```r
## Not run:
res <- item_create(user_id(), "item-to-delete")
item_rm(res)

## End(Not run)
```

---

### item_rm_files

Remove files associated with an item

Description

Removes existing files associated with an item.

This function is the key way to remove files attached to SB items.

Usage

```r
item_rm_files(sb_id, files, ..., session = current_session())
```

Arguments

- `sb_id` An `sbitem` object or a character ScienceBase ID corresponding to the item
- `files` A character vector of file names to remove. If not supplied, defaults to removing all attached files.
- `...` Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
- `session` Session object from `authenticate_sb`.Defaults to anonymous or last authenticated session

Value

An updated object of class `sbitem`

Examples

```r
## Not run:
res <- item_create(user_id(), "item456")
cat("foo bar", file = "foobar.txt")
item_append_files(res, "foobar.txt")
res <- item_get(res)
res$files[[1]]$name
res2 <- item_rm_files(res)
res2$files

## End(Not run)
```
item_update

Update a SB item with new metadata

Description

Updates metadata associated with a ScienceBase item based on supplied list of new or updated metadata elements.

Usage

item_update(sb_id, info, ..., session = current_session())

Arguments

- **sb_id**: An `sbitem` object or a character ScienceBase ID corresponding to the item
- **info**: list of metadata info (key-value pairs) to change on the item
- **...**: Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
- **session**: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

Value

An object of class `sbitem`

Examples

```r
## Not run:
res <- item_create(user_id(), "item-to-update")
out <- item_update(res, list(title = "item-updated"))
out$title
## End(Not run)
```

item_update_identifier

Add custom identifier to an existing item

Description

Adds or updates an item’s alternative identifier. This can add additional identifiers or update those already in place. See `query_item_identifier` for finding items based on alternative identifier.
Usage

```r
item_update_identifier(
    sb_id,
    scheme,
    type,
    key,
    ...
    session = current_session()
)
```

Arguments

- `sb_id`: An `sbitem` object or a character ScienceBase ID corresponding to the item
- `scheme`: The identifier scheme
- `type`: The identifier type
- `key`: The identifier key
- `...`: Additional parameters are passed on to `GET`, `POST`, `HEAD`, `PUT`, or `DELETE`
- `session`: Session object from `authenticate_sb`. Defaults to anonymous or last authenticated session

Examples

```r
## Not run:
session = authenticate_sb("user@usgs.gov")
item_update_identifier("5485fd99e4b02acb4f0c7e81", "scheme", "type", "key", session=session)
## End(Not run)
```

---

**item_upload_create**

- **Description**
  Create a new item with files attached, all in one call to SB

- **Usage**
  ```r
  item_upload_create(
      parent_id,
      files,
      ...
      scrape_files = TRUE,
      session = current_session()
  )
  ```
item_upsert

Arguments

parent_id  An sbitem object or character ScienceBase ID corresponding to the parent item (folder)
files      A string vector of paths to files to be uploaded
...        Additional parameters are passed on to GET, POST, HEAD, PUT, or DELETE
scrape_files   logical should the files be scraped for metadata? If TRUE, sciencebase will attempt to create extensions based on the files.
session    Session object from authenticate_sb. Defaults to anonymous or last authenticated session

Value

An object of class sbitem

Examples

## Not run:
# You'll need a parent id for a folder/item
## here, using your highest level parent folder
file <- system.file("examples", "books.json", package = "sbtools")
item_upload_create(user_id(), file)
## End(Not run)

item_upsert  Upsert an SB item

Description

Either creates or updates (if item already exists)

Usage

item_upsert(
  parent_id = user_id(),
  title = NULL,
  ...
  info = NULL,
  session = current_session()
)
Arguments

parent_id  
An **sbitem** object or character ScienceBase ID corresponding to the parent item (folder)

title  
The title of the new SB item

...  
Additional parameters are passed on to **GET**, **POST**, **HEAD**, **PUT**, or **DELETE**

info  
(optional) list of metadata info for the new item

session  
Session object from **authenticate_sb**. Defaults to anonymous or last authenticated session

Value

An object of class **sbitem**

Examples

```r
## Not run:
# helper function to make a random name
aname <- function() paste0(sample(letters, size = 5, replace = TRUE), collapse = "")

# Create an item - by default we use your user ID
(x <- item_upsert(title = aname()))

# Call item_upsert again, updates this time
item_upsert(x, info = list(
  contacts = list(list(name = "Suzy"))
))

## End(Not run)
```

---

**query_items**  
Query SB for items using generic query parameters

Description

Query SB for items using generic query parameters

Usage

```r
query_items(query_list, ..., session = current_session())
```

Arguments

query_list  
List of item query selectors. See Details.

...  
Additional parameters are passed on to **GET**

session  
Session object from **authenticate_sb**
Details

The following is a list of query parameters you can use in the query_list parameter.

- s (character): Only option: "Search"
- format (character): One of "json", "xml", "csv", or "atom"
- q (character): Query string
- q (character): Lucene query string
- max (integer): Number of records to return. Default: 20
- offset (integer): Record to start at. Default: 1
- fields (character): Character vector of fields to return
- folderId (character): Alphanumeric string representing folder ID
- parentId (character): Alphanumeric string representing folder ID. This can be used to return all children items within the folder, but not within sub-folders.
- sort (character) One of "firstContact", "dateCreated", "lastUpdated", or "title". By default sorted by search score
- order (character) One of "asc" or "desc"
- ids Vector of item ids.
- ancestors (character): Alphanumeric string representing folder ID. This can be used to return all children items within the folder, even within sub-folders. Used as a filter
- tags Filter by tags, e.g., "distribution". Used as a filter
- browseCategory One of .... Used as a filter
- browseType One of .... Used as a filter
- dateRange A json string with keys dateType and choice. Where dateType is one of Acquisition, Award, Collected, dateCreated, Received, Reported, Transmitted, Due, End, Info, lastUpdated, Publication, Release, or Start. And where choice is one of day, week, month, year, or range (if range selected, also supply start and end keys with dates of the form YYYY-MM-DD). Used as a filter
- projectStatus One of Active, Approved, Completed, In Progress, Proposed. Used as a filter
- spatialQuery A WKT string. Used as a filter
- extentQuery Use existing extents (footprints) to search against item bounding boxes and representational points. This is a alphanumeric string.

Value

An object of class response

See Also

query_item_identifier, query_item_in_folder
Examples

```r
## Not run:
# Basic query
library(httr)
res <- query_items(list(s = "Search", q = "water", format = "json"))
httr::content(res)

# Paging
## max - number of results
res <- query_items(list(s = "Search", q = "water", format = "json", max = 2))
length(httr::content(res)$items)
res <- query_items(list(s = "Search", q = "water", format = "json", max = 30))
length(httr::content(res)$items)
## offset - start at certain record
res <- query_items(list(s = "Search", q = "water", format = "json", max = 30, offset = 10))
httr::content(res)
## links - use links given in output for subsequent queries
httr::content(httr::GET(
  content(res)$nextlink$url
))

# Return only certain fields
res <- query_items(list(s = "Search", q = "water", format = "json", fields = 'title'))
httr::content(res)$items[[1]]

# Search a folder ID
res <- query_items(list(s = "Search", q = "water", format = "json", folderId = '504216b9e4b04b508bfd337d'))
httr::content(res)$items

# Filter by ancestor
query_items(list(s = "Search", ancestors = "4f831626e4b0e84f6086809b", format = "json"))

# Filter by tags
content(query_items(list(s = "Search", tags = "distribution", format = "json")))

# Filter by browse category
content(query_items(list(s = "Search", browseCategory = "Image", format = "json")))

# Filter by browse type
content(query_items(list(s = "Search", browseType = "Collection", format = "json")))

# Filter by WKT geometry string
wkt1 <- "POLYGON((-104.4 41.0,-95.1 41.0,-95.1 37.5,-104.4 37.5,-104.4 41.0))"
wkt2 <- "POLYGON((-104.4 38.3,-95.2 38.3,-95.2 33.7,-104.4 34.0,-104.4 38.3))"
content(query_items(list(s = "Search", spatialQuery = wkt1, format = "json")))
content(query_items(list(s = "Search", spatialQuery = wkt1, spatialQuery = wkt2, format = "json")))

# Project status
content(query_items(list(s = "Search", projectStatus = "Active", format = "json")))
```
query_item_identifier  

Description

Find all items under a scheme or also query by for a specific type and key

Usage

```r
def query_item_identifier(
    scheme,
    type = NULL,
    key = NULL,
    ...
)
```
query_item_in_folder

**Argument**

- **scheme**  The identifier scheme
- **type**  (optional) The identifier type
- **key**  (optional) The identifier key
- **...**  Additional parameters are passed on to GET
- **session**  (optional) SB Session to use, not provided queries public items only
- **limit**  Max number of matching items to return

**Value**

The SB item id for the matching item. NULL if no matching item found.

**Examples**

```r
## Not run:
authenticate_sb()

ex_item = item_create(title="identifier example")
item_update_identifier(ex_item, "project1", "dataset1", "key1")
ex2_item = item_create(title="identifier example 2")
item_update_identifier(ex2_item, "project1", "dataset1", "key2")

#query the specific item
query_item_identifier("project1", "dataset1", "key1")

#or get the collection of items based on the ID hierarchy
query_item_identifier("project1")

item_rm(ex_item)
item_rm(ex2_item)

## End(Not run)
```

**Description**

Search for text in the title, abstract, etc. within an SB folder and any subfolders.
Usage

query_item_in_folder(
    text,
    folder,
    ...,
    session = current_session(),
    limit = 20
)

Arguments

text  text in the title, abstract, etc. of the desired item
folder an SB item ID for the folder to search in
...  Additional parameters are passed on to GET
session (optional) SB Session to use, not provided queries public items only
limit Max number of matching items to return

Value

A list of matching items as sbitem objects.

Description

Generic SB query function to construct advanced queries.

The following is a list of query parameters you can use in the query_list parameter.

- q (character): Query string
- q (character): Lucene query string
- fields (character): Character vector of fields to return
- folderId (character): Alphanumeric string representing folder ID
- parentId (character): Alphanumeric string representing folder ID. This can be used to return all children items within the folder, but not within sub-folders.
- sort (character) One of "firstContact", "dateCreated", "lastUpdated", or "title". By default sorted by search score
- order (character) One of "asc" or "desc"
- ids Vector of item ids.
- ancestors (character): Alphanumeric string representing folder ID. This can be used to return all children items within the folder, even within sub-folders. Used as a filter
- tags Filter by tags, e.g. "distribution". Used as a filter
• browseCategory One of .... Used as a filter
• browseType One of .... Used as a filter
• dateRange A json string with keys dateType and choice. Where dateType is one of Acquisition, Award, Collected, dateCreated, Received, Reported, Transmitted, Due, End, Info, lastUpdated, Publication, Release, or Start. And where choice is one of day, week, month, year, or range (if range selected, also supply start and end keys with dates of the form YYYY-MM-DD). Used as a filter
• projectStatus One of Active, Approved, Completed, In Progress, Proposed. Used as a filter
• spatialQuery A WKT string. Used as a filter
• extentQuery Use existing extents (footprints) to search against item bounding boxes and representational points. This is a alphanumeric string.

Usage

query_sb(query_list, ..., limit = 20, session = current_session())

Arguments

query_list List of item query selectors. See Details.
... Additional parameters are passed on to GET
limit Maximum number of returned items. Will do paging to retrieve results when limit is over 1000. Use with caution, queries 10k results are slow.
session Session object from authenticate_sb

Value

A list of sbitem objects

See Also

query_items

Examples

## Not run:
query_sb(list(q = "water"))

# Search by project status
query_sb(list(projectStatus = "Active"))

# Search a folder ID
query_sb(list(q = "water", folderId = '504216b9e4b04b508bfd337d'))

# Filter by ancestor
query_sb(list(ancestors = "4f831626e4b0e84f6086809b"))

# Filter by tags
query_sb(list(tags = "distribution"))
# Filter by browse category
query_sb(list(browseCategory = "Image"))

# Filter by browse type
query_sb(list(browseType = "Map Service"))

# Filter by WKT geometry string
wkt1 <- "POLYGON((-104.4 41.0, -95.1 41.0, -95.1 37.5, -104.4 37.5, -104.4 41.0))"
wkt2 <- "POLYGON((-104.4 38.3, -95.2 38.3, -95.2 33.7, -104.4 34.0, -104.4 38.3))"
query_sb(list(spatialQuery = wkt1))
query_sb(list(spatialQuery = wkt1, spatialQuery = wkt2))

# Date range
query_sb(list(dateRange = '{"dataType":"Collected","choice":"year"}'))
query_sb(list(dateRange = '{"dataType":"lastUpdated","choice":"month"}'))
query_sb(list(dateRange = '{"dataType":"Release","choice":"range","start":"2014-09-01","end":"2015-09-01"}'))

## End(Not run)

---

**query_sb_datatype**  
Query SB for specific data type

**Description**

Queries ScienceBase for items with matching datatype.

**Usage**

```r
query_sb_datatype(datatype, ..., limit = 20, session = current_session())
```

**Arguments**

- **datatype**: Character string indicating datatype. See *sb_datatypes* for full list of available datatypes.
- **...**: Additional parameters are passed on to GET
- **limit**: Maximum number of returned items. Will do paging to retrieve results when limit is over 1000. Use with caution, queries 10k results are slow.
- **session**: Session object from *authenticate_sb*

**Value**

A list of *sbitem* objects. List of length 0 means no matches were found.
Examples

# query for items with WFS Layer data
query_sb_datatype('Static Map Image')

# query for US Topo maps
query_sb_datatype('Map Service')

---

query_sb_date | Query SB for items within a date range

Description

Queries ScienceBase for items with timestamps within a certain date/time range.

Usage

query_sb_date(
    start = as.POSIXct("1970-01-01"),
    end = Sys.time(),
    date_type = "lastUpdated",
    ...
    limit = 20,
    session = current_session()
)

Arguments

<table>
<thead>
<tr>
<th>Argument</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>start</td>
<td>Start date as POSIXct object. Defaults to 1970-01-01</td>
</tr>
<tr>
<td>end</td>
<td>End date as POSIXct object. Defaults to today.</td>
</tr>
<tr>
<td>date_type</td>
<td>Which object timestamp to query against. Options are (case sensitive): 'Acquisition', 'Award', 'Collected', 'dateCreated', 'Received', 'Reported', 'Transmitted', 'Due', 'End', 'Info', 'lastUpdated', 'Publication', 'Release', 'Repository Created', 'Repository Updated', 'Start'.</td>
</tr>
<tr>
<td>...</td>
<td>Additional parameters are passed on to GET</td>
</tr>
<tr>
<td>limit</td>
<td>Maximum number of returned items. Will do paging to retrieve results when limit is over 1000. Use with caution, queries 10k results are slow.</td>
</tr>
<tr>
<td>session</td>
<td>Session object from authenticate_sb</td>
</tr>
</tbody>
</table>
query_sb_doi

Examples

## Not run:
# find items updated today
query_sb_date(Sys.time(), Sys.time())

# find items with publications from the 1970's
query_sb_date(as.POSIXct('1970-01-01'), as.POSIXct('1980-01-01'),
               date_type='Publication', limit=1000)

## End(Not run)

---

query_sb_doi

Query SB for specific DOI (Digital Object Identifier)

Description

Queries for ScienceBase items with a specific DOI identifier. In ScienceBase, these are stored as additional unique identifiers.

Usage

query_sb_doi(doi, ..., limit = 20, session = current_session())

Arguments

doi
  DOI to search for as character

... Additional parameters are passed on to GET

limit
  Maximum number of returned items. Will do paging to retrieve results when limit is over 1000. Use with caution, queries 10k results are slow.

session
  Session object from authenticate_sb

Value

A list of sbitem objects. List of length 0 means no matches were found.

Examples

# Two example DOI-specific queries
query_sb_doi('10.5066/F7M043G7')

query_sb_doi('10.5066/F7Z60M35')
**query_sb.spatial**  
*Query SB based on spatial extent*

**Description**

Queries ScienceBase based on a spatial bounding box. Accepts either an sp spatial data object (uses the spatial object’s bounding box) or long/lat coordinates defining the bounding box limits.

**Usage**

```r
query_sb.spatial(
  bbox,
  long,
  lat,
  bb_wkt,
  ..., 
  limit = 20,
  session = current_session()
)
```

**Arguments**

- **bbox**
  An sp spatial data object. The bounding box of the object is used for the query.

- **long**
  A vector of longitude values that will define the boundaries of a bounding box. Min and Max of supplied longitudes are used. (alternate option to bbox).

- **lat**
  A vector of latitude values that will define the boundaries of a bounding box. Min and Max of supplied latitude are used. (alternate option to bbox).

- **bb_wkt**
  A character string using the Well Known Text (WKT) standard for defining spatial data. Must be a POLYGON WKT object.

- **...**
  Additional parameters are passed on to **GET**

- **limit**
  Maximum number of returned items. Will do paging to retrieve results when limit is over 1000. Use with caution, queries 10k results are slow.

- **session**
  Session object from **authenticate_sb**

**Examples**

```r
#specify the latitude and longitude points to define the bounding box range.
# This is simply bottom left and top right points
query_sb.spatial(long=c(-104.4, -95.1), lat=c(37.5, 41.0), limit=3)

#use a pre-formatted WKT polygon to grab data
query_sb.spatial(bb_wkt="POLYGON((-104.4 41.0,-95.1 41.0,-95.1 37.5,-104.4 37.5,-104.4 41.0))",
                 limit=3)
```
query_sb_text  Query SB for items containing specific text

Description
Queries for ScienceBase items that have matching text in the title or description

Usage
query_sb_text(text, ..., limit = 20, session = current_session())

Arguments
- **text**: Text string for search
- **...**: Additional parameters are passed on to GET
- **limit**: Maximum number of returned items. Will do paging to retrieve results when limit is over 1000. Use with caution, queries 10k results are slow.
- **session**: Session object from authenticate_sb

Value
A list of sbitem objects. List of length 0 means no matches were found.

Examples

```r
#query for a person's name
query_sb_text('Luna Leopold')

#query for one of the old river gaging stations
query_sb_text('Lees Ferry')
```

sbitem  ScienceBase item class

Description
ScienceBase item class
Usage

```r
as.sbitem(x, ...)
```

## Default S3 method:
```
as.sbitem(x, ...)
```

is.sbitem(x)

Arguments

- **x**: Input, variety of things, character, list, or sbitem class object
- **...**: Further args passed on to `item_get`, only in the method for character class inputs

Examples

```r
# Single item from item_get()
item_get("4f4e4b24e4b07f02db6aea14")

# Get many w/ e.g., an lapply() call
library("httr")
res <- query_items(list(s = "Search", q = "water", format = "json"))
if(res$status != 404) {
  ids <- vapply(httr::content(res)$items, "[[", ",", "id")
  out <- lapply(ids[1:3], item_get))
}

# create item class from only an item ID
as.sbitem("4f4e4b24e4b07f02db6aea14")

# sbitem gives back itself
(x <- as.sbitem("4f4e4b24e4b07f02db6aea14"))
as.sbitem(x)
```

---

**sb_datatypes**

*Query SB for all available datatypes*

Description

Queries ScienceBase for the list of all available datatypes. This can be coupled with `query_sb_datatype` to query based on the type of data

Usage

```r
sb_datatypes(limit = 50, session = current_session())
```
**sb_ping**

**Arguments**
- **limit**  
  Maximum number of returned items. Will do paging to retrieve results when limit is over 1000. Use with caution, queries 10k results are slow.
- **session**  
  Session object from `authenticate_sb`

**Examples**

```r
## Not run:
#return all datatypes (limit 50 by default)
sb_datatypes()
## End(Not run)
```

---

**sb_ping**  
*Ping ScienceBase to see if it's available*

**Description**

Ping ScienceBase to see if it's available

**Usage**

```r
sb_ping(...)```

**Arguments**

- ...  
  Additional parameters are passed on to **GET**

**Value**

Boolean (TRUE) indicating if a connection to ScienceBase can be established and if it is responding as expected. FALSE otherwise.

**Examples**

```r
#TRUE if all is well and SB can be contacted
sb_ping()
```
session_details  Get session info

Description
Get the details associated with current ScienceBase user session.

Usage
session_details(..., session = current_session())

Arguments
... Additional parameters are passed on to GET
session SB session object from authenticate_sb

Value
list, if not logged in states that, but if logged in, user details

Examples
## Not run:
session_info()
## End(Not run)

session_logout  Logout of a ScienceBase session

Description
Logout of a ScienceBase session

Usage
session_logout(..., session = current_session())

Arguments
... Additional parameters are passed on to GET
session SB session object from authenticate_sb

Value
invisible, returns nothing if logged out, or errors with message
session_renew

Examples

```r
## Not run:
session_logout()

## End(Not run)
```

session_renew

Checks current session and re-authenticates if necessary

Description

Checks the state of your Sciencebase session, re-authenticates if the session is expired, and simply renews if the session is active.

Usage

```r
session_renew(password, ..., username, session = current_session())
```

Arguments

- **password**
  - The password to use, if needed, to renew the session.
- **...**
  - Any additional parameters are currently ignored.
- **username**
  - Optional. Used only to confirm that the current username is what you expect; if you want to switch usernames, use `authenticate_sb()` instead of this function.
- **session**
  - SB session object from `authenticate_sb`. Default is the current session.

Value

Returns the session object.

Examples

```r
## Not run:
# an empty call is sufficient if the session is current,
# but will break if haven't been logged in before
session_renew()

# include a password if session may be expired
session_renew("newpass")

# optionally confirm the value of the current username
session_renew(username='olduser@usgs.gov', 'newpass')

## End(Not run)
```
session_validate  

Validate sbtools session state

Description

A session is considered valid if it is NULL or a true, non-expired SB session

Usage

```r
session_validate(session = current_session())
```

Arguments

- `session` sbtools session object (from `authenticate_sb``

Details

This validates the underlying RCurl session. The session object becomes invalid if the R session has been saved to disk or persisted through an R restart. This verifies that the session object is either valid, or is a NULL object, which means no session state is being persisted. Note, this does not verify the credentials are valid or that you have permission to access the SB item, so it does not guarantee a successful request.

Value

TRUE/FALSE indicating if session is valid and can be used. Returns TRUE if session is NULL as well.

Examples

```r
## Not run:
session = authenticate_sb('user@usgs.gov')

#return true as underlying RCurl session is valid
session_validate(session)
```

## End(Not run)
**set_endpoint**

**Set SB endpoint**

**Description**

Sets the internal URLs used to either the production or development (beta) SB server. URLs are stored internally to the package.

**Usage**

```r
set_endpoint(endpoint = c("production", "development"))
```

**Arguments**

- `endpoint` Indicate which SB endpoint you want to use: `c("production", "development")`

**Author(s)**

Luke Winslow

**Examples**

```r
set_endpoint('prod')
# getting item from production SB servers
item_get('5060b03ae4b00fc20c4f3c8b')

set_endpoint('dev')
# getting item from beta SB servers
item_get('521e4686e4b051c878dc35d0')
```

---

**user_id**

**Get your parent ID**

**Description**

Required for creating items

**Usage**

```r
user_id(..., session = current_session())
```
Arguments

... Additional parameters are passed on to POST

session Session object from authenticate_sb

Value

A single character string, your user id

Examples

## Not run:
user_id()

## End(Not run)
