Package ‘wiseR’

November 29, 2018

Type Package

Title A Shiny Application for End-to-End Bayesian Decision Network Analysis and Web-Deployment

Version 1.0.1

Author Tavpritesh Sethi [aut, cre],
Shubham Maheshwari [aut]

Maintainer Tavpritesh Sethi <tavpriteshsethi@iiitd.ac.in>

Description A Shiny application for learning Bayesian Decision Networks from data. This package can be used for probabilistic reasoning (in the observational setting), causal inference (in the presence of interventions) and learning policy decisions (in Decision Network setting). Functionalities include end-to-end implementations for data-preprocessing, structure-learning, exact inference, approximate inference, extending the learned structure to Decision Networks and policy optimization using statistically rigorous methods such as bootstraps, resampling, ensemble-averaging and cross-validation. In addition to Bayesian Decision Networks, it also features correlation networks, community-detection, graph visualizations, graph exports and web-deployment of the learned models as Shiny dashboards.

Description

Powered by R/Shiny, wiseR is a GUI for learning and extending Bayesian networks into Decision Networks. wiseR can be used for probabilistic reasoning (in the observational setting), causal inference (in the interventional setting) and policy decisions (in Decision network setting). Functionalities include end-to-end implementations for data-preprocessing, Structure-learning, Exact Inference, Approximate Inference, extending the learned structure to Decision network, Policy optimization, Correlation networks, Community detection, Visualization, Export and Web-deployment as Shiny dashboards. In addition to statistically rigorous methods of bootstraps, ensemble structure and cross-validation, wiseR includes resampling statistics for approximate-inference and comparison with exact inference. It also includes functions for community detection and visualization of network topology. wiseR is powered by shinydashboard, bnlearn, gRain, visNetwork and HydeNet among other packages.

Usage

wiser()
